

## Video memory:

1. Write an assembly program to display the character '**A**' at the top-left corner of the screen using direct video memory access.
2. Write instructions to print the character '**X**' in **red color on black background** at row 10, column 20.
3. Write a program to clear the entire screen by filling it with spaces.
4. Write a loop that prints the character '\*' across the **first row** of the screen.
5. Write a program to display the string "**HELLO**" at row 12, column 30.
6. Write an assembly routine that fills the screen with **white characters on a blue background**.
7. Write a program that prints numbers **0-9** in the first row using video memory
