

Graded Lab 2

Task 2

Create a member function which takes an object as an argument and add it to the other fraction.

Also create a new data member:

- a unique **count** automatically assigned to it (hint: count = object number)

In main() show the total number of objects created.

Fraction addFractions (Fraction&);

This function adds an object to the other object and return the new object.

Ouput:

Fraction 1: 1/3

Fraction 2: 3/2

//new fraction after addition

resultantFraction:11/6
